Keywords: speech intelligibility, degraded speech, noise-vocoding, alpha oscillations, left inferior temporal cortex

A commentary on

Left temporal alpha-band activity reflects single word intelligibility

by Becker, R., Pefkou, M., Michel, C. M., and Hervais-Adelman, A. G. (2013). *Front. Syst. Neurosci.* 7:121. doi: 10.3389/fnsys.2013.00121

Figure 5 of the article by Becker et al. (2013) contained a minor error, which we hereby rectify. In the original figure at the bottom left of panel C the indication of the sagittal section used for display of the inverse solution is incorrect. We therefore

re-submit **Figure 5** with the correct cross-section for subpanel C.
